

Transpolis becomes a new official Euro NCAP laboratory

Lyon, 14th of January

Transpolis will increase its contribution to the European New Car Assessment Programme (Euro NCAP) after its accreditation to conduct official active safety system testing on passenger cars, vans and trucks.

Supported by a major local mobility ecosystem and strongly committed to road safety (infrastructures, passengers and VRU, vehicles), Transpolis started its vehicle testing activities in 2018 including pre-NCAP tests.

Since 2024, Transpolis has been supporting Euro NCAP's new heavy truck rating scheme testing protocols, bringing to the table its expertise in commercial vehicles testing.

“Transpolis is a welcome addition to Euro NCAP's trusted network of safety test labs around Europe. Increasing our test capacity for active safety testing of cars, vans, and trucks will increase our resilience, allow us to keep up with the rapid development of safety technology, and, ultimately, provide better advise to consumers and businesses. We applaud Transpolis's commitment to excellence and quality, and are eager to collaborate with their experts in the delivery of our roadmap for safer mobility.”
Michiel VAN RATINGEN, Euro NCAP Secretary General

“Transpolis is proud to contribute to the ongoing improvement of vehicle safety standards and to be part of Euro NCAP's efforts that are driving towards achieving Vision Zero.” Xavier BENOIT, Chairman of Transpolis.

About Transpolis

A unique urban mobility lab in Europe for safer vehicles and infrastructures

Since 2011, Transpolis has made a significant investment in world-class test track facilities, state-of-the-art equipment and robust processes at its test laboratory in the Lyon region (France).

Committed to road safety research and testing activities for many years, Transpolis has 4 major business unit:

- **Safety of infrastructures:** Transpolis is the only test laboratory in France for road barriers and road blockers with 30 years of experience.
- **Safety of passengers:** Transpolis manufactures and sells the APTS - invented by Eiffel University - for child and adult dummies. The APTS are officially adopted by UNECE R129 and Chinese NCAP.
- **Safety of vehicles:** launched in 2018 with world-class test track facilities, Transpolis provides support to OEM and Tier 1 for vehicle engineering, testing and homologation.
- **Collaborative R&D:** these projects are mostly supported by Eiffel University, with a focus on decarbonation, cybersecurity and smart cities.

Transpolis is certified ISO 9001 and ISO 17025.
